

# How much money does a wind turbine lose

## Overview

---

3E's analysis shows that 85% of turbines experienced performance decline, with nearly half exhibiting statistically significant degradation. In many cases, losses exceeded 0.4% per year, which is four times the industry norm. It's not just about wear and tear. Yes, turbine components. Determining the payback time of a wind turbine can be complicated. 6 MW turbine to be about 6 years and 7. The 13th annual Cost of Wind Energy Review uses representative utility-scale and distributed wind energy projects to estimate the levelized cost of energy (LCOE) for land-based and offshore wind power plants in the United States. – Data and results are derived from 2023 commissioned plants. In 2022, Nordex raised its turbine prices, with operational costs estimated at \$42,000 to \$48,000 annually. Capital costs ranged from \$48 to \$88 per megawatt. Commercial Projects Offer Best Economics: Utility-scale wind.

## How much money does a wind turbine lose

### How Long Does it Take a Wind Turbine to Pay for Itself?

Determining the payback time of a wind turbine can be complicated. It depends on several factors, including the cost of the turbine, its power output, and the price of electricity.
