

How much power does a 36 volt inverter have

Overview

This 36V pure sine wave inverter provides smooth, home-quality power with up to 2500W continuous and 5000W peak output. It is ideal for running 110V/120V appliances in RVs, boats, camping, or for home outages. All of these higher-voltage systems should be used when powering equipment that draws over 3,000. After thorough testing, I highly recommend the WZRELB 3000W 36V 120V Pure Sine Wave Power Inverter 2 AC for anyone needing serious, stable power with safety features and portability in mind. Surge is the maximum power that the inverter can supply, usually for only a short time (usually no longer than a second unless specified in the inverter's specifications). It changes 36-volt DC power, like from batteries, into 120V or 240V AC power. It can handle a huge surge of 14,000 watts.
