

How to connect photovoltaic panel light lines in series

Overview

How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. Continue with the rest until all panels are connected. Even partial shading on one panel can reduce total string output by 30-50%, making series wiring best suited for installations with minimal shading throughout the day. The wiring configuration you choose directly affects your system's voltage, current, and overall performance, which determines how much solar energy you harvest. This connection creates a daisy chain effect. This setup boosts the array's voltage while maintaining the same amperage, allowing you to stack voltage output across your solar panel system.

Easy installation

Safe and Reliable

Perfect Compatibility

Product Introduction

- Scalable from 10kWh to 50kWh
- Self-Consumption Optimization
- Integrated with inverter to avoid the compatibility problem
- LFP battery, safest and long cycle life
- Stackable design, effortless installation
- Capable of High-Powered Emergency: Backup and Off-Grid Function
