

How to deal with photovoltaic plastic panel extrusion

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT
IN OFF-GRID MODE

✓ CONVENIENT OPERATION
& MAINTENANCE

✓ PRE-WIRED

Overview

Placing plastic directly over solar panels is not recommended as it can reduce efficiency by up to 50% or more due to light refraction and heat buildup, which can also damage the panels. The protective film is typically applied during manufacturing to shield the panel from scratches and debris, but it must be removed before installation to ensure optimal sunlight absorption. The plastic film adhered to solar light cells is primarily a protective layer, crucial for shielding the delicate photovoltaic material from environmental damage, such as moisture, UV radiation, and physical abrasion. It is usually made of materials like ethylene-vinyl acetate (EVA), though newer. All solar panels have protective film attached to them to serve their purpose if wrapping them during transport and installation. Understanding solar panel film's impact on performance, 2. Their unique properties make them especially.

How to deal with photovoltaic plastic panel extrusion

Should I remove a plastic cover on a solar panel

Following these simple guidelines can keep property owners from: wasting valuable assets, wasting time, causing the panels to malfunction, triggering early breakage, and incurring significant repair costs.
