

How to waterproof the bottom of photovoltaic bracket

Overview

High-quality sealing tapes and adhesives are commonly used to waterproof the gaps between photovoltaic panels. These materials are designed to withstand extreme weather conditions and provide a durable seal. Supported by strong policies from national and local governments, the distributed photovoltaic power generation system has developed rapidly, becoming one of the key. Because the average rooftop solar installation requires penetrating the roof multiple times, one of EcoFasten's principles has been to design mounts that protect the roof from water intrusion for the life of the solar array. Many of our most popular mounts incorporate our patented Four-Seal. For the installation of rooftop solar power plants, "waterproofing" has to be said to be a very important factor! As the world's leading manufacturer of solar mounting system, CHIKO Solar explained how to deal with the waterproof problem when the solar mounting bracket is installed on the roof!. Regarding the installation of rooftop solar power plants, "waterproof" has to be said to be a very important element! The first thing that needs to be informed is that the general principle of roof waterproofing treatment is: it should be guided and not blocked, that is, to ensure that the node. First of all, we need to tell you that the general principle of roof waterproof treatment is: it is better to guide rather than block, that is, to ensure that the node treatment can smoothly let the water drain off when the water is accumulated in rainstorm, so as to ensure that the roof does not.

How to waterproof the bottom of photovoltaic bracket

How to deal with the waterproofing when installing the roof solar bracket

Since the base is not related to the structural layer, it is difficult to install additional waterproof layers. The waterproof layer of the original roof should be preserved as much as possible

...
