

How wide and long is a photovoltaic panel

Overview

The standard residential solar photovoltaic panel size you'll see most often is based on a 60-cell configuration, typically measuring about 67 inches long by 40 inches wide. This size offers the best balance between power output, handling ease, and fitting standard roof dimensions. A 400W panel has the same physical footprint whether it produces 350W or 450W - the difference lies in cell. There is no standardized chart that will tell you, for example, "A typical 300-watt solar panel is this long and this wide. " If you want to calculate how many solar panels you can put on your roof, you will obviously need to know the size of a solar panel.
