Generators for hydropower plants

For more than 125 years, ANDRITZ Hydro has been supplying generators for hydropower stations. Today, generators with a total capacity of more than 160,000 MVA are in service all over the world.

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

Hydroelectric power , Definition, Renewable Energy, Advantages

Hydroelectric power is a form of renewable energy in which electricity is produced from generators driven by turbines that convert the potential energy of moving water into mechanical energy.

LARGE HYDRO GENERATORS

Each large hydro generator is engineered to run smoothly under any operating condition, while reducing structural stress and improving reliability for the lifetime of the turbine.

An Introduction To Generators For Hydroelectric Power Plants

This blog post provides an in-depth introduction to generators used in hydroelectric power plants, outlining their essential role in converting mechanical energy into electrical energy.

What Kind Of Generator Is Used In Hydroelectric Power Plant

Hydropower generates electricity by utilizing the kinetic energy of flowing or falling water. Hydropower plants are typically constructed near water sources, where water flows through a pipe ...

How Hydropower Works

At the plant level, water flows through a pipe--also known as a penstock--and then spins the blades in a turbine, which, in turn, spins a generator that ultimately produces electricity.

Inside a Hydropower Generator

The turbine turns a shaft which rotates a series of magnets past copper coils and a generator to produce electricity. The process produces clean renewable energy.
