

Iceland Lead Carbon Energy Storage Power Generation Project

Overview

On Thursday, 16 June 2025, Mr. Jóhann Páll Jóhannsson, Minister of Environment, Energy and Climate, formally opened the Silverstone facility by Carbfix at Hellisheiði Geothermal Powerplant. The Silverstone facility is the first onshore carbon capture and storage facility to be. To understand the innovation behind Iceland Carbon Capture and Storage, we must first define the broader concept of carbon capture and storage (CCS). CCS is a suite of technologies aimed at reducing the amount of carbon dioxide entering the atmosphere by capturing emissions at their source or even. Officials in Iceland recently celebrated the opening of Steingerdur, a state-of-the-art carbon capture installation that is transforming Iceland's ON Power plant into one of the world's first near-zero emission geothermal power stations. The nation is a. Landsvirkjun, the national power company of Iceland, on June 28 announced it intends to capture and reinject carbon dioxide (CO₂) from Þeistareykir (Theistareykir) Geothermal Station, and at the same time reduce CO₂ emissions from Krafla Power Station through enhanced well management efforts at. The GECO project: Lowering the emissions from the Hellisheidi and Nesjavellir Power Plants via NCG capture, utilization, and storage Innovative non-condensable gas (NCG) capture and storage technology has been developed and proved successfully at an industrial scale at the Hellisheidi power plant. The Silverstone facility by Carbfix at Hellisheiði Geothermal Power Plant was formally opened on 19 June 2025 by the Minister of Energy, Environment and Climate, Mr.
