

India australia solar power

Overview

New Delhi: Australia and India are deepening cooperation in renewable energy, especially in solar power, green hydrogen, and workforce training, as the two nations aim to expand the use of non-fossil energy sources to power their economies. Prime Minister Albanese and Prime Minister Modi welcomed the launch of the elevated India-Australia Renewable Energy Partnership at the Australia-India Annual Summit in Brazil, on 19 November 2024. The partnership is a significant milestone in India-Australia cooperation and will guide our climate. Under the India-Australia Renewable Energy Partnership signed in 2024, the two countries seek to build resilient and self-reliant clean-energy supply chains, aligning their industrial strategies with renewable power goals to drive investments and jobs in the sector. India can offer Australia an alternate source for solar photovoltaic modules, while its companies. On the sidelines of the recently concluded November Group of 20 (G20) Summit in Brazil and ahead of the fifth anniversary of the Australia-India Comprehensive Strategic Partnership next year, Australia and India signed a number of measures designed to strengthen bilateral cooperation. This exclusive collaboration will focus on projects in the Oil and Gas sector in India, as well as other.
