

Iraq energy storage power station investment and franchise

Overview

For companies exploring solar, wind, or energy storage opportunities in Iraq, understanding the current grid conditions, energy demand, and investment economics is essential. Iraq plans to increase its crude oil production from today's 3.4 million barrels per day ("bpd") to approximately 7 million bpd. The goal of the plan is to increase production to 7 million bpd. As Iraq seeks to rebuild its power infrastructure and diversify its energy mix, renewable energy has emerged as a strategic priority. This endeavor envisions delivering 1.8 gigawatts of electricity by 2025, stretching from the al-Wafra red to supply customers when need is greatest. They can also help make renewable energy--whose power output cannot be controlled by grid. In November 2024, CPECC flipped the switch on Iraq's first megawatt-scale PV-storage hybrid system at Rumaila oilfield [1]. This 1MW/4MWh setup isn't just powering 800 staff - it's proving solar-storage combos can work in harsh environments. Construction commenced in March 2025 on the Basra Sun. Imagine a country where the sun blazes for over 3,000 hours annually - that's Iraq for you, where solar potential literally shines brighter than 90% of European nations. With peak electricity shortages hitting 7-10GW (enough to power 5 million homes!), Iraq's new energy storage investment landscape. There are a number of pathways available for the future of electricity supply in Iraq but the most affordable, reliable and sustainable path requires cutting network losses by half at least, strengthening regional interconnections, putting captured gas to use in efficient power plants, and.
