

Is it safe to apply film to photovoltaic panels

Overview

Leaving that shipping film on creates serious problems. Plastic traps extra heat, raising module temperature. New solar panels often arrive with protective film—but should it stay on?

This comprehensive guide explains the crucial difference between factory shipping films (which must be removed) and aftermarket plastic covers (which have specific valid uses). It is usually made of materials like ethylene-vinyl acetate (EVA), though newer. Placing plastic directly over solar panels is not recommended as it can reduce efficiency by up to 50% or more due to light refraction and heat buildup, which can also damage the panels. For temporary weather protection, use a high-transparency, anti-reflective coating or film specifically designed. Due to their properties, our front sheet ETFE films are a go-to within photovoltaic panel applications. Implementing effective cleaning techniques, 3. When you first receive your outdoor solar lights, they are equipped with this film to prevent scratches, smudges, or any other damage during installation.

Is it safe to apply film to photovoltaic panels

Can you put plastic over solar panels

Placing plastic directly over solar panels is not recommended as it can reduce efficiency by up to 50% or more due to light refraction and heat buildup, which can also damage the panels.
