

Is the solar system any good

Overview

Track noteworthy space objects in your browser in a 3D simulation of the solar system. Track noteworthy space objects in your browser in a 3D simulation of the solar system. The Solar System is the gravitationally bound system of the Sun and the masses that orbit it, most prominently its eight planets, of which Earth is one. [11] The system formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc. NASA's Voyager 1 and Voyager 2 are the only spacecraft leaving our solar system. Three other spacecraft – Pioneer 10, Pioneer 11, and New Horizons – will eventually hit interstellar space. Our planetary system is called “the solar system” because we use the word “solar” to describe things. *This Interactive 3D Simulation is built on data provided by NASA JPL HORIZONS database for solar system objects and International Astronomical Union's Minor Planet Center. Distances and speeds are estimates based on this data.

Outer Solar System
Trans-Neptunian region

Astronomers sometimes divide the Solar System structure into separate regions. The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region consisting of the objects beyond Neptune
