

# Jiang New Solar Power Generation

## Overview

---

A one million-kilowatt integrated solar-thermal and photovoltaic comprehensive energy demonstration project has officially connected to the grid for power generation in northwest China's Xinjiang Uygur Autonomous Region. China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time. SONG WEIXING/FOR CHINA DAILY China's newly installed wind and solar power capacity nearly doubled year-on-year during the first half of this year, as the country ramps up its transition to cleaner energy. Last year, a viral drone video from China's Guizhou province revealed an entire mountain range blanketed in solar panels stretching to the horizon. It's a stunning visual, but it doesn't even begin to capture the staggering amount of solar power being produced by the People's Republic. The best choice for backup power supply, light weight, low light power generation designed to be portable in the demanding. Wind and solar now account for 37% of the total power capacity in the country, an 8% increase from 2022, and widely expected to surpass coal capacity, which is 39% of the total right now, in 2024.
