

Large-scale liquid flow energy storage

Overview

Flow batteries store energy in liquid electrolytes, enabling scalable and flexible large-scale energy storage solutions. A new recipe provides a pathway to a safe, economical, water-based, flow battery made with Earth-abundant materials RICHLAND, Wash. — A commonplace chemical used in water treatment facilities has been repurposed for large-scale energy storage in a new battery design by researchers at the Department. Mhor Energy has developed a liquid flow battery that stores energy on a large scale, offering a durable alternative to traditional battery technologies. Pumped hydro is the most mature form of LDES. This article explores their applications in renewable energy integration, industrial power management, and grid stability, backed by real-world data and market trends.
