

Latest information network for the sale of photovoltaic waste panels

Overview

A comprehensive new report from IEA PVPS Task 12 reveals how countries around the world are managing the growing volumes of end-of-life solar modules, implementing regulations and scaling recycling infrastructure to handle the expected increment in PV waste over the coming decades. The global Waste Photovoltaic Panel Recycling market is poised for significant expansion, projected to reach an estimated USD 4.5 billion by 2025, with a robust Compound Annual Growth Rate (CAGR) of 12. This growth is fundamentally driven by the escalating deployment of solar energy. When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Find information here about different types of solar panels and how they are regulated at end of life. The “ Status of. The WEEE Directive of the European Union, amended in 2012 and 2018, mandates the collection and recycling of electronic devices, including solar panels.
