

Latvia energy storage for microgrids

Overview

The addition of two utility-scale battery energy storage systems (BESS) in Latvia marks the final milestone in synchronizing the Baltic power grids with continental Europe, according to the country's transmission system operator. Discover how Latvia's innovative energy storage initiatives are reshaping grid stability and renewable integration. Meanwhile, Estonia is advancing two major BESS projects, backed with. Latvia's Energy Strategy 2050 outlines major changes in renewable energy production and storage, with significant investments planned in wind, solar, biomass, and biogas, as well as in energy storage technologies like batteries and subsurface systems to ensure supply stability [3]. The project is integrated with Targale Wind Park, a 58.
