

# Liquid cooling safety technology for communication base station energy storage system

## Overview

---

This article provides an in-depth analysis of energy storage liquid cooling systems, exploring their technical principles, dissecting the functions of their core components, highlighting key design considerations, and presenting real-world applications. In response to the challenges presented by heat island effects, Kehua has launched its new generation S<sup>3</sup>-EStation 2.0 5MWh smart liquid cooled ESS, demonstrating its forward-looking vision and technical expertise. The system employs an innovative “full liquid cooling + top exhaust” design, breaking. Liquid-cooled systems utilize a CDU (cooling distribution unit) to directly introduce low-temperature coolant into the battery cells, ensuring precise heat dissipation. Consequently, liquid cooling has become the mainstream solution for large-scale energy storage scenarios, driving the. ESS technology is having a significant impact on a wide range of markets, including data centers that utilize uninterrupted power supplies (UPS) and telecom base stations that utilize battery back-up systems. Telecom base stations require energy storage systems to ensure that cloud data and. Integrated performance control for local and remote monitoring. Data logging for component level status monitoring. Realtime system operation analysis on terminal screen. Higher energy density, smaller cell temperature Difference. TECHNICAL SHEETS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
