## Overview

---

With projected revenues of nearly \$5.9 billion by 2030—up from \$680 million in 2023—the region is poised for a rapid and uneven expansion in storage markets across utility-scale, commercial & industrial (C&I), and remote grid applications. CEO Enrique Garduño expects exponential growth in battery storage as regulation evolves, costs fall and Mexico's renewable energy expansion accelerates. The company announced a USD 110 million investment plan and a partnership with BYD Energy Storage to deploy 300 MWh of BESS systems. Mexico is. The new rule requires solar and wind power plants to include battery systems with a capacity equivalent to 30% of their installed power, aiming to add 574 MW of storage by 2028. In Mexico, this concept has taken on greater relevance. Energy transition initiatives have continued to decelerate in Mexico, as the administration of President Andrés Manuel López Obrador (AMLO) favoured backing state-owned enterprises such as national oil firm Pemex and power utility CFE. Mexico's ambitious clean energy goals and rapidly expanding renewable energy capacity (primarily solar and wind) necessitate energy storage to address. Latin America is entering a transformative decade in its energy landscape, driven by the urgent need to expand power output, decarbonize, lower energy costs, improve grid resilience, and integrate massive volumes of renewable energy. Battery Energy Storage Systems (BESS) have emerged as the.

## Mexico energy storage boom

### Electric storage in Mexico: challenges and progress

In summary, electrical energy storage in Mexico and other Latin American countries is in a phase of growth and development. The implementation of energy storage systems is essential to ...
