

# Microgrid applications somalia

## Overview

---

Many communities rely on costly and polluting diesel minigrid systems, the AMP Somalia project is tailored to the country's energy sector and aims to enable the hybridization of existing diesel minigrids and to make solar minigrids more competitive and affordable. The Federal Government of Somalia launched AMP to increase access to electricity and bring new development opportunities to rural communities as a pathway to sustainable development. The microgrid under study consists of various renewable energy resources (RERs). Science Extract: A recent study confirmed the feasibility and benefits of a hybrid renewable energy system (HRES) for powering Hobyo Seaport in Somalia, demonstrating significant cost savings and environmental advantages compared to traditional diesel-based systems. For this purpose, two solar plants with a total capacity of 8 megawatts, a containerized lithium-ion power storage. The city-wide power grid of Berbera (Somaliland) including the largest port in the region will be monitored and controlled with microgrid technology from DHYBRID (Gauting) from April 2021.

## Microgrid applications somalia
