

Mobile base station equipment photovoltaic system

Overview

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage. EverExceed's Telecom Base Station Stacked Solar Power System provides an innovative solution by integrating solar generation with traditional grid power—helping operators achieve stable, efficient, and sustainable energy supply. The Five Core Advantages of EverExceed Telecom Base Station. Our fully integrated mobile energy solution, engineered for uninterrupted, off-grid power. A cutting-edge mobile energy platform combining solar power, shore-power, and generator-based backup in one self-contained unit. This robust system ensures consistent, mission-critical power in any location. An objective of the present invention is to provide a mobile photovoltaic generation unmanned base station system for easily installing and conveniently moving the mobile base station, smoothly providing power supply even in a place difficult for the power supply, continuously supplying the power. This paper presents the solution to utilizing a hybrid of photovoltaic (PV) solar and wind power system with a backup battery bank to provide feasibility and reliable electric power.

Mobile base station equipment photovoltaic system

KR20200109571A

An object of the present invention is to solve such a problem, and it is easy to install and move a mobile base station, and it is possible to supply power smoothly even in places where power
