

Monitoring uninterruptible power supply self-operation

Overview

Using an uninterruptible power supply's own interface for performance and up-time defeats the purpose of such monitoring. What happens if the UPS fails?

Well, so too will the monitoring interface that you have relied on. Instead, the industry's best practice is to deploy UPS power. Custom alerts and data visualization let you quickly identify and prevent power supply issues. The Auto-Discovery feature of Paessler PRTG helps you set up your monitoring in minutes. If your UPS battery isn't working as it should, it can significantly impact your business' productivity and profitability. Although complex, a UPS has a very simple overall design. Every UPS has power inputs (for the intake of commercial power during normal operation), power outputs (to connect protected. In today's digital and industrial landscape, uninterrupted power is crucial to maintain the efficiency, safety, and integrity of systems.
