

# Monocrystalline P-type PERC stacked bifacial modules

## Overview

---

The 182 modules are characterized by high-efficiency, high-bifaciality ratio, low operation temperature, excellent performance in low irradiation, weather resistance, etc. DAS Solar developed various module type designs depending on applications to ensure this series of. Mono-perc is an advanced version of mono-crystalline panels that are considered to have higher efficiency even in low-light conditions. In this guide, I am here with a detailed guide on mono-perc solar panels. Before I. PERC is the acronym of Passivated Emitter and Rear Cell; a dense oxide film is arranged on the back of cell as the passivation structure to remarkably reduce the back composite of cells and improve the open-circuit voltage and efficiency of cells, thereby enhancing the module conversion efficiency. LONGi supplies its reliable, high-performance solar modules to 6 continents and 85 countries and regions to power the world toward a low carbon future. LONGi has laid out several. \*STC: Irradiance 1000 W/m<sup>2</sup>, cell temperature 25°C, Air Mass AM 1. Average efficiency reduction of 4.5 % at 200 W/m<sup>2</sup> according to EN 60904-1. Except P<sub>mpp</sub>, all other parameters have a tolerance of +/-3 %, measurement uncertainty <3 % 38.28. We adopt new technologies and automatic equipments to manufacture high quality and reliable solar modules. What is PERC bifacial technology?

PERC bifacial technology is a.
