

National Hydrogen Energy Base Station

Overview

The HyGrid Project, located on Long Island, will aid in decarbonizing networks by blending green hydrogen into the existing distribution system, and is expected to heat approximately 800 homes and fuel 10 municipal vehicles. Department of Energy Hydrogen Program, led by the Hydrogen and Fuel Cell Technologies Office (HFTO) within the Office of Energy Efficiency and Renewable Energy (EERE), conducts research and development in hydrogen production, delivery, infrastructure, storage, fuel cells, and multiple end. Clean hydrogen is key to a clean energy future and ensuring we fully eliminate fossil fuels from our electric and gas system by 2050. We see potential to create 100% hydrogen-fueled neighborhoods, blend hydrogen with Renewable Natural Gas (RNG) into the existing gas networks, and fuel our. NLR's technology validation team is analyzing the availability and performance of existing hydrogen fueling stations, benchmarking the current status, and providing feedback related to capacity, utilization, station build time, maintenance, fueling, and geographic coverage. As the market grows for. The United States hydrogen refueling network has 52 operational stations as of 2025—and it's shrinking. After Shell closed seven California stations in February 2024, the infrastructure that was supposed to revolutionize transportation is collapsing instead of expanding. Keep up with the. WALTHAM, MA/ALBANY, NY - National Grid is taking additional steps into a clean energy future today by announcing a partnership with Standard Hydrogen Corporation to demonstrate the nation's first multi-use, renewable hydrogen-based energy storage/delivery system in New York's Capital Region, with.
