

# National Reserve Solar Power Generation

## Overview

---

NLR is advancing concentrating solar-thermal power (CSP)—along with integral long-duration thermal energy storage—to provide reliable heat for industrial processes and firm electricity. CSP uses a large array of reflectors to concentrate the sun's rays and convert them into. For the study, Evan Rosenlieb and Marie Rivers, geospatial scientists at the U. Department of Energy National Renewable Energy Laboratory (NREL), as well as Aaron Levine, a senior legal and regulatory analyst at NREL, quantified for the first time exactly how much energy could be generated from. Massive Potential for Additional Solar, Geothermal, and Onshore Wind Power Growth on Federal Lands to Boost American Energy Production WASHINGTON, D. Federal reservoirs could help meet the country's solar energy needs, according to a study published in the journal Solar Energy. control performance standards 1 and 2.
