

# New Energy Storage Peak Shaving

## Overview

---

Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage systems or other means. In this article, we explore what is peak shaving, how it works, its benefits, and intelligent battery energy. Whether you're managing a factory's fluctuating load or trying to optimize your home's solar setup, battery-based peak shaving offers a smart, scalable way to take control of your power bills and reduce grid stress. It involves reducing the peak demand on the grid by using stored energy or adjusting consumption patterns.
