

# New photovoltaic panel power plant in

## Overview

---

In June 2024, China connected the 3.5 GW Midong solar project near Ürümqi in Xinjiang to the grid, making it, at that moment, the world's largest single operational PV plant. The installation spans desert terrain and is reported to generate around 6. HG14 exemplifies how offshore setups multiply efficiency via natural cooling. (Photo: Getty) China has transformed a vast stretch of shallow coastal. According to the latest U. 1 GWdc of capacity in the first quarter of 2023, a 47% increase from the same period in 2022. Support CleanTechnica's work through a Substack subscription or on Stripe. Or support our Kickstarter campaign! Despite the abrupt shift in federal energy policy this year, the march of renewable energy technology continues apace. Construction of utility-scale renewable-power facilities around the world has been increasing rapidly in recent years. Although the total percentage of global power needs met by photovoltaic energy alone remains small, at about 6 percent, it is on the rise.
