

# Nordic first low-temperature energy storage system

**18650** 3.7V  
Li-ion  
RECHARGEABLE BATTERY

**2000mAh**

## Overview

---

Finland has taken a bold step toward renewable energy innovation with the introduction of sand battery technology. This groundbreaking system, developed by Polar Night Energy, uses simple sand to store excess heat generated by solar or wind energy and release it when needed. In the town of Kankaanpää, western Finland, engineers have built the world's first commercial-scale sand battery, using. Only months after inaugurating the world's largest sand battery - a 1 MW/100 MWh thermal storage system - Polar Night has committed to building a project twice its size. The battery, which stores heat within a tank of sand, is installed at energy company Vatajankoski's power plant. Finland's groundbreaking sand battery stores excess renewable electricity as heat, offering a long-lasting, low-cost, and carbon-neutral solution for meeting winter heating demands in cold climates. Sand batteries offer a cost-effective and efficient alternative to lithium-ion batteries, capable of storing energy for. In a small Finnish town with a big climate goal, an unassuming tower of sand is quietly storing solar and wind energy all while making a powerful statement about clean tech innovation.
