

Oslo electric vehicle policy

Overview

The Norwegian Parliament has established a national objective that by 2025, all new cars sold must be zero-emission, including electric or hydrogen-powered options. This long-standing political commitment has accelerated the move away from fossil fuels. Norway's success in promoting electric vehicles has mainly been driven by generous tax incentives, including the exemption of zero-emission vehicles (ZEVs) from the registration tax, VAT and motor fuel taxes, as. Oslo is the capital city with the highest proportion of electric cars worldwide. What was previously little known: at public AC chargers, the capital's residents used to pay by the minute. Now, the city is changing its pricing model, but it is not completely removing time as a criterion. After all, Norway is leading the EV transition with its 'polluter pays' principle, using tax incentives to make zero-emission cars the more affordable option Norway's strategy for advancing the electric vehicle (EV) transition is underpinned by substantial government incentives and a tax system rooted in the.
