

# PV inverter keeps restarting

## Overview

---

If an inverter keeps shutting off it is often for safety reasons. Other possible reasons are incorrect parameters, lack of power and damaged circuits. This can occur if the voltage level is too high and the inverter cable is not thick enough to handle the incoming power. I find it odd because both times it has happened at night and i only heard 3 beeps which indicated low voltage shut off. The first time running my computer, it lasted well into the night, second night it shut off. For many homeowners and system owners, inverter shutting down feels sudden, confusing, and sometimes even alarming. Other days it restarts every hour. Sometimes it shuts down for minutes, sometimes for hours, and sometimes it flashes error codes that disappear before you can.
