

Photovoltaic Hydrogen Energy Storage Mingyang Electric

Overview

Construction has begun on a project by utility Shenzhen Energy and technology firm Mingyang in China to demonstrate the world's largest pure-hydrogen turbine as part of a wider renewable energy storage system. Jupiter I is designed to. Economy: the use of on-site water electrolysis hydrogen production, hydrogen source is stable and reliable; eliminating the storage and transportation links, you can realize a lower price of hydrogen than the market price; small size of the equipment, covers an area of small, reduce the acquisition. A 30MW pure hydrogen gas turbine unit can effectively solve the problem of power abandonment in wind and solar energy projects. Jupiter I can resolve the challenge of electricity wastage. The 30MW turbine will be installed at the Otake High-Tech Industrial Development Zone in. Service Create Value, Existence Forges the Future. Multiple application scenarios, prior design, standardized construction, all around service, committed to providing efficient and reliable industrial & commercial solar power system integration solution.

Photovoltaic Hydrogen Energy Storage Mingyang Electric

Green Hydrogen Project Tracking

Through a closed-loop design encompassing green hydrogen production, storage, transportation, power generation, and terminal consumption, Mingyang is promoting the deep ...
