

Photovoltaic flexible support construction site

FLEXIBLE SETTING OF
MULTIPLE WORKING MODES

Overview

Flexible mounting solution is an architectural form that fix solar modules between the buildings. It has significant advantages when applied in large span areas, such as rivers, sewage treatment plants, orchard nursery and other areas where continuous pile posts cannot be placed. Traditional rigid photovoltaic (PV) support structures exhibit several limitations during operational deployment. These flexible PV supports, characterized by their heightened sensitivity to wind loading, necessitate a thorough analysis. Fixed supports (rigid structures) and flexible supports (tensioned cable systems) are two main methods used in constructing photovoltaic power plants, and their construction technology has significant differences. Over the past decade, built-in ph times less space to generate the same amount of energy.
