

Photovoltaic light panel

Battery String-S224

- 1C Charge/Discharge
- Easy configuration and maintenance
- Power supply can be single battery string or parallel battery strings

Overview

PV cells are electrically connected in a packaged, weather-tight PV panel (sometimes called a module). When light shines on a photovoltaic (PV) cell – also called a solar cell – that light may be reflected, absorbed, or pass right through the cell. The PV cell is composed of semiconductor material; the “semi” means that it can conduct electricity better than an insulator but not as well as a good. Solar photovoltaic lighting systems are simplified, low-power, off-grid photovoltaic systems gaining popularity in various applications for illuminating outdoor spots, including for security and safety reasons. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. Understanding how solar panels work in conjunction with lighting can provide. Installing solar panels can help you save money on your electricity bill and reduce your carbon footprint.
