

# Photovoltaic panel installation on wooden beam slope roof

**ESS**

## Overview

---

To effectively install solar energy systems on a sloped roof, 1. The angle of the slope allows panels to capture sunlight more directly, reducing energy loss. For example, roofs with a pitch of 30 to 45 degrees often perform well for solar harvesting. Rainwater naturally cleans. And when it comes to roof structure construction, there are two main methods: rafters (also know as stick built) and engineered trusses. However, each has its pros and cons. Gravel is the most-used surface material beneath the canopy, but crushed stone, patio pavers, turf, and even decks are also options.

### Engineered Trusses vs. Rafters When Installing Solar

Condition of Trusses and Rafters  
Age and Condition of Roof  
Local Solar Policies and Building Codes  
Another factor when determining if you can install solar panels on rafters or trusses is local solar policies and building codes. Some local governments have policies and codes in place that require certain roofing structures when installing solar panels. Other local governments will require special inspections, engineering, and reporting before so See more on [greenridgesolar](#) or [itron-solar](#)
