

Photovoltaic panel nameplate identification specifications

Overview

The nameplate ratings on photovoltaic (PV) panels and modules summarize safety, performance, and durability specifications. Safety standards include UL1730, UL/IEC61730, and UL7103, a recent standard for building integrated photovoltaics (BIPV). The NEC 2023 code revision was published in October of 2022. This white paper discusses the changes and standard (EN), published in 2003, details the information that manufacturers must supply with a PV module. Maximum is the lower of the following 2 values: The total STC DC power rating for all PV Modules divided by the nominal string voltage value that manufacturers must. Performance standards include IEC 61215, which specifies requirements for the design qualification and type approval of terrestrial photovoltaic modules suitable for long-term operation in general open-air climates, as defined in IEC 60721-2-1.

Photovoltaic panel nameplate identification specifications

A Proposed Standard for: Nameplate, Datasheet, and Sampling

Nameplates and datasheets shall contain at least the minimum information specified in the Solar ABCs standard. The number of samples used to calculate the measured average power shall be ...

PV LABELING WHITE PAPER

The panel consolidated similar labeling requirements, found in many sections of the code, into a single section. This should make compliance and inspection easier.

How to read the nameplate data of

a photovoltaic panel?

This nameplate data provides crucial information about the panel's performance and will help you make informed decisions. In this guide, we will explain in simple terms how to read the ...
