

Photovoltaic panels after lightning strike

Overview

Lightning strikes can damage solar panels directly or indirectly. Surge protection devices like Citel DS72-RS-120 are recommended. When lightning damage does occur, it accounts for 32% of weather-related solar panel incidents, making proper protection a valuable investment. Lightning is a common cause of failures in photovoltaic (PV) and wind-electric systems. In this article, you will learn how to protect your solar power. Solar PV systems are designed to collect energy from sunlight, but they also have large metallic components including panels, frames, and mounts, along with extensive electrical wiring. The first major reason is that many PV systems are poorly grounded and poorly protected. All photos courtesy of NOAA unless otherwise noted.
