

# Photovoltaic panels installation on the north and south slopes of the roof

## Overview

---

Yes, you can install solar panels on a north-facing roof, but efficiency will be lower compared to south-facing panels. However, with tilted mounting systems, high-efficiency panels, and microinverters, homeowners can still generate 50-85% of the energy they would on an ideal. Whether you're planning a new installation or optimizing an existing system, understanding solar panel direction and orientation is crucial for maximizing your system's efficiency in 2025. This comprehensive guide will walk you through everything you need to know about positioning your solar panels. Choosing the right roof slope for solar panels affects energy production, installation cost, and long-term performance. This guide explains how roof pitch, geographic location, seasonal sun angles, and mounting strategies determine the ideal tilt for photovoltaic (PV) systems in the United States. This averages out the sun's position over 365 days.
