

Photovoltaic panels stopped working

Overview

Checking Voc (voltage open circuit) and Isc (current short circuit) measurements can help diagnose panel issues. Junction boxes should be checked for tight screws or properly crimped connections. When your solar panels stop producing power, the solution often lies in simple fixes you can identify within minutes. Loose connectors and improperly seated terminals can cause low voltage or current. Obstructions, dirt, a faulty inverter, or broken panels could be why your solar panels aren't working. If the panels are broken or the inverter isn't working properly, call a pro to. Solar panels are remarkably durable, but like any technology exposed to the elements year-round, they can experience performance issues that impact your solar energy production.
