

# Poland energy conservation

## Overview

---

The Polish energy sector is the fifth largest in Europe. [1] In recent years, Poland has been reducing its reliance on coal, increasing its wind and solar power capacity, and introducing nuclear power to diversify its energy mix and reduce carbon emissions. In 2023, solar energy expanded by. Poland's National Energy and Climate Plan for the years 2021-2030 (NECP) was submitted to the European Commission on Decem. The full version is available in Polish, please find below the summary in. The European Union, as one of the signatories to the Paris Agreement, has introduced its own legal provisions to implement its goals. The European Green Deal, introduced in 2019, outlines European policy actions aimed—like the Paris Agreement—at achieving climate neutrality by 2050. The objectives. The Poland country profile provides a concise overview of key trends across three dimensions: environment and climate; socio-economic change; and system change (energy, mobility and food) in the country.
