

Price of generator sets for the solar power plant in Arequipa Peru

Overview

Did you know Arequipa's solar radiation levels exceed 6.5 kWh/m²/day – 30% higher than Germany's national average?

This makes Peru's second-largest city a prime location for solar energy storage systems. In this guide, we'll break down the latest pricing trends, key cost drivers, and practical tips. Zelestra, a Spanish renewable energy company, has officially switched on the country's largest solar farm. The solar farm, dubbed the San Martín project, consists of 450,000 solar panels and will generate over 830 GWh of clean energy annually, powering more than 400,000 homes. Highlighting this green transformation is the country's largest solar facility, the San Martín solar park, a monumental project setting a new benchmark for clean energy. Peru's largest solar installation—the 300 MWdc San Martín plant—has officially entered commercial operation in Arequipa's La Joya district. Its projected annual output is 830 GWh. Knowing the Levelized Cost of Energy (LCOE) allows for evaluating the profitability of different energy generation technologies, identifying the options with the lowest costs, and, in turn, promoting the transition to more sustainable energy sources for governments and private companies.
