

Price quote for a 40-foot solar-powered container for farm use

Overview

A standard freight farm container could cost between \$50,000 to \$100,000. This price typically includes a repurposed 40-foot shipping container, fully equipped with vertical farming technology, climate controls, hydroponic systems, LED lighting, and IoT monitoring systems. It's a QUICK 10 minute phone call! COMPLETE SET UP! RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize. Hydroponic container farms offer a clean, efficient way to grow food year-round without soil or farmland. Containers come in sizes like 20 ft, 40 ft, and 45 ft—customizable for different crop volumes and growing setups. Add-ons like water recirculation, solar panels, and remote monitoring boost. While there's no one-size-fits-all answer since every project is unique, it's safe to ballpark an upfront investment between \$50K-\$85K for most standard 40-foot containers converted into farms. Efficient hydraulics help get the solar panels ready quickly. If playback doesn't begin.
