

# Prospects for solar power generation and energy storage in Chile

## Overview

---

Chile has the potential to run exclusively on renewable generation, with an estimated energy mix of 46% solar, 31% wind, 12% hydroelectric, and 8% flexible natural gas power plants, as well as 23% of battery storage capacity. The country as part of that ambition has a goal of producing at least 70% of its electricity from renewable energy by the end of. Chile has strong conditions for wind and solar energy, and is pursuing storage to help overcome intermittent supply (Image: Ximena Navarro / Dirección de Prensa, Presidencia de la República de Chile) Renewable energy is Latin America's present and future. Ensuring projects are paid for injecting power into the grid during peak periods has supported growth, and ambitious battery energy. According to modelling by the International Energy Agency, Chile is on track to eliminate coal-fired power by 2030 and get to over 90% renewables on an annual basis by then. These goals are not merely aspirational but represent a strategic imperative for a country seeking to leverage its natural advantages, namely its unique geography that. Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation. Chile has the potential to run.

## Prospects for solar power generation and energy storage in Chile

---

### Energy storage is a challenge and an opportunity for Chile

Chinese companies have in recent years built, or announced plans to build, Chile's longest power line, solar plants and wind farms, while in battery storage, solar giant Trina has ...

## How Energy Storage is Powering Chile's Sustainable Future

Chile possesses some of the world's best conditions for solar power generation, particularly in the Atacama Desert,

which experiences extraordinarily high levels of solar radiation.

### **Energy storage alleviated solar PV, wind curtailment increase in Chile**

Despite the continued growth of curtailed solar PV and wind, the addition of operational energy storage to the grid

in 2025 helped mitigate the issue,  
according to the trade body.
