

Raising pheasants under photovoltaic panels

Overview

Several cooperatives have combined solar power with livestock grazing to employ “solar pastures,” which use the land under and around the solar panels for livestock grazing. What are the benefits?

Agrivoltaic systems can improve land use by allowing you to produce more. NREL researcher Jordan Macknick works with teams from University of Massachusetts (UMass) Clean Energy Extension and Hyperion on a photovoltaic dual-use research project at the UMass Crop Animal Research and Education Center in South Deerfield, MA. Photo by Dennis Schroeder / NREL. As the United States pushes to reach energy independence in the future. Agrivoltaics combines farming and solar power production on the same plot of land. 9 MIN READ • Last updated: 1. solar grazing has emerged as a valuable tool. Using livestock to manage vegetation at solar sites can enhance site value by keeping land in agricultural use, providing new income streams for local farmers, and adding environmental benefits such a combining agriculture with renewable energy.
