

Reduced carbon emissions niamey

Overview

The project reintroduces locally derived resources to the construction industry. Passive cooling techniques protect the housing against Niger's scorching. Niamey, the capital of Niger, is a city that, like many others around the world, is faced with the challenge of balancing development with sustainability. At the same time, it also experiences unprecedented population growth. 21. ity and societal im em me th the e f ear . The objective of the paper was to estimate carbon stock of *Azadirachta indica* in Niamey. We assessed the structure and carbon stocks of neem trees across urban land use and land cover types using non-destructive method. We measured 853 (DBH \geq 5 cm) stems within 102 plots over 19.
