

# Saudi Arabia plans small-scale solar power generation

## Overview

---

In line with the Saudi Electricity Company's commitment to the objectives of the Kingdom's Vision 2030 on renewable and sustainable energy, supporting the national economy, and conserving natural resources, and in response to the bylaw that governs the integration of small-scale. In line with the Saudi Electricity Company's commitment to the objectives of the Kingdom's Vision 2030 on renewable and sustainable energy, supporting the national economy, and conserving natural resources, and in response to the bylaw that governs the integration of small-scale. In line with the Saudi Electricity Company's commitment to the objectives of the Kingdom's Vision 2030 on renewable and sustainable energy, supporting the national economy, and conserving natural resources, and in response to the bylaw that governs the integration of small-scale solar power systems. Saudi Arabia launched Vision 2030 in 2016, which aims to diversify the economy and reduce dependence on oil revenues. One key component of Vision 2030 is to source at least 50 percent of its power from renewable energy by 2030, expand its capacity to 130 gigawatts (GW), 58.7 GW of which is expected. Saudi Arabia is rapidly scaling up renewables as it works to reduce domestic carbon dioxide emissions, free up more oil, power new industries, and secure a role in the global energy transition. Saudi Arabia's first wind farm, Dumat Al Jandal Wind Farm, November 2023. (Credit: Charles Phillips). RIYADH: Saudi Arabia is a world leader when it comes to extracting energy sources from the ground, but it is the Kingdom's drive to harness a power supply in the sky that is attracting attention. Historically reliant on its vast oil reserves for economic prosperity and global influence, the country faced risks from oil price volatility and a. In the International Energy Agency's 2050 Global NZE scenario solar PV is anticipated to account for approximately 20 percent of global energy consumption. Local solar irradiance is a key factor driving solar power adoption. GCC countries are in a privileged position, in the middle of the so-called.
