

Sheep farming under photovoltaic panels

Overview

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy — and offers high incomes in the process. It preserves agricultural land, reduces costs and benefits both farmers and energy companies.

Sheep farming under photovoltaic panels

Why Sheep Grazing Under Solar Panels Is the Sustainability Hack

What if the key to tougher wool, cluckier sheep, and reduced farm expenses lay in the shade beneath solar panels?
