

# Shidao wind turbine was blown down by the wind

## Overview

---

The storm's violent winds, reaching 234 km/h, tore through the area on September 7, toppling the newly installed turbines and causing widespread damage to roads, communication, and power lines. In a stunning twist, wind turbines designed to withstand storms were left bent and destroyed by Super Typhoon Yagi in the Hainan province of China. However, while one wind farm was badly wrecked – the rest stood strong. This came as no surprise to one Chinese wind energy expert, who. China is building a wind turbine of unthinkable dimensions The world's largest single-capacity wind turbine, located off the coast of China, recently experienced a blade failure during testing. X-20MW, suffered blade breakage in December after surviving Typhoon Yagi.
