

Solar Ocean Power Generation

Overview

Marine solar energy—floating photovoltaic arrays deployed on ocean surfaces—represents a promising frontier in clean energy production, offering up to 20% higher efficiency than land-based systems due to the cooling effect of water. These sophisticated installations already power remote island. This study investigates the integration of offshore renewable energy systems, specifically combining Ocean Thermal Energy Conversion based on Organic Rankine Cycle and solar water heating in two different working fluids—1,1,1,2-Tetrafluoroethane and 1,1,1,3,3-Pentafluorobutane in Andaman and.
