

Solar Photovoltaic Power Generation to Control Desertification

Overview

China has begun leaning on agrivoltaic projects to help tamp down dust storms in its vast deserts, halt the march of desertification, and restore vegetation — while generating clean electricity for local communities and industries, too. The strategy appears to be working. It aims to curb desertification and expand renewable energy deployment. Inner Mongolia, China Image: Mamarks the 46th Arbor Day in China. According to the China Land Greening Status Bulletin released by the National Greening Committee Office, China completed afforestation of 59.685 million mu, and land reclamation from desertification of. Deserts make up a quarter of China's total landmass making the nation particularly vulnerable to desertification, but researchers from the Xi'an University of Technology may have found a solution Research from China's Qinghai province reveals solar farms in desert regions may revitalise fragile. HOHHOT, Oct. 27 -- On the edge of the Ulan Buh Desert in north China, rows of photovoltaic panels shine in the sun. (Photo provided by JinkoSolar) China is leveraging its vast desert regions to develop. A new national plan focused on using solar power to fight desertification has passed expert review and is now awaiting State Council approval.

Solar Photovoltaic Power Generation to Control Desertification

China's green energy solution powers sustainability while combating

China is leveraging its vast desert regions to develop large-scale solar and wind power bases that not only generate clean energy but also play a vital role in reversing desertification, ...
