

Solar Power Generation Public Opinion Report

Overview

In June 2022, SEIA & Global Strategy Group conducted an online survey of 803 registered voters nationwide to explore perceptions of solar energy and the persuasiveness of messages, both positive and negative, about the industry and our growth. Large-scale solar power generates about 4% of all electricity in the U. Capacity has almost doubled in the last year. Smaller-scale installations – including solar panels on things like homes and public buildings – have also seen sharp growth. The new Center survey asked Americans how common. A new analysis of social media posts finds that public support for solar energy remains high, though that support declined significantly from 2016 to 2022.
