

Solar energy systems in the netherlands

Overview

The Netherlands had an average installed solar capacity of 0.71 MW/km², with Zwijndrecht reaching over 5 MW/km². 8 GW in the residential sector and 1. The Dutch PV Portal has been created to provide publically accessible information on solar energy in the Netherlands, based on scientific research performed by the Photovoltaic Materials and Devices (PVMD) group at Delft University of Technology. Cederik Engel, Managing Director of CCE The Netherlands and Head of ESG at CCE Holding, sees strong prospects ahead. The Netherlands leads the EU in per-capita solar PV. The Netherlands leads Europe in solar capacity per person (nearly 5x the UK's), with 88% coming from rooftops rather than large solar farms, helping make the country a net energy exporter. This was a sign of deceleration compared to previous years due to grid saturation and regulatory changes that affected utility-scale installations.
